A Guide for Attendant Training in Institutions for the Mentally Retarded.

New Jersey State Dept. of Institutions and Agencies, Trenton. Div. of Mental Retardation.

Spons Agency-Public Health Service (DHEW), Washington, D.C.

Grant-OM-838

Note-112p.

EDRS Price MF-\$0.50 HC-\$5.70

Descriptors-*Attendant Training, Curriculum, Lesson Plans, *Mentally Handicapped, Mental Retardation,
*Program Development, *Teaching Guides, Teaching Methods

The guide is intended as a stimulus for the establishment of training programs for newly employed attendants and as an aid to the development of on-going in-service training. The instructor should select those subject areas which meet the needs of the institution and its residents. It is expected that additions and deletions will be made. The body of the manual is an outline which indicates the topic and purpose for each lesson and presents in parallel columns suggested content, teaching methods and aids, and reading references in relation to each sub-topic. Lesson topics include: (1) Background on mental retardation, (2) growth and development, (3) social emotional needs, (4) housekeeping in the cottage, (5) safety, (6) civil defense, (7) training, feeding, and clothing the resident, (8) personal health and hygiene, (9) nursing care, (10) common diseases and conditions, (11) body mechanics, (12) leisure time, (13) sex education, (14) religion, (15) discipline, (16) referring problems, (17) and the responsibility of the attendant to the patient. The appendix includes a glossary, bibliography, film list, and list of agencies from which resource materials may be obtained. (JK)

A Guide for Attendant Training In Institutions For the Mentally Retarded

U.S. DEPARTMENT OF HEALTH, EDUCATION & WELFARE
OFFICE OF EDUCATION

THIS DOCUMENT HAS BEEN REPRODUCED EXACTLY AS RECEIVED FROM THE PERSON OR ORGANIZATION ORIGINATING IT. POINTS OF VIEW OR OPINIONS STATED DO NOT NECESSARILY REPRESENT OFFICIAL OFFICE OF EDUCATION POSITION OR POLICY.

PURPOSE:

To improve the care given to all residents
within institutions for the retarded.

Preparation of this manual was made possible by P.H.S. Grant OM-838 from the U.S. Department of Health, Education and Welfare, National Institute of Health, Public Health Service.

ACKNOWLEDGEMENTS

This project was conceived of by a committee invoked by the Division of Mental Retardation representing the five public institutions for the retarded in the State of New Jersey. The members of the committee and superintendents of these institutions contributed in a significant way to the concepts reflected in this document. Federal funds made possible the employment of a group of dedicated professionals who, assisted by the New Jersey departmental committee, produced this document.

FOREWORD

by

PEARL S. BUCK

"I said that I chose my child's permanent home by finding as the head the sort of person whom I could trust. Today, were I to choose again, I would also go into every cottage and look at the type of attendant there. Were they the hard-faced professional type, the ones who go from institution to institution callous, cruel, ready to strike a child who does not conform, would reject that place. For the most important person in an institution, so far as the child is concerned, and therefore so far as the parent is concerned, is not the executive, and not the man or woman in the offices, not even the doctor and the psychologist and the teacher, but the attendant, the person who has the direct care of the child."

From the book "The Child Who Never Grew"

The John Day Publishing Company, N. Y.

BY WAY OF INTRODUCTION

THE PURPOSE

This guide has been prepared to assist those who have the responsibility of training attendants in institutions for the mentally retarded. It attempts to identify those duties necessary for attendants to know in order that they may carry out their responsibilities to the residents and to the institution and suggests ways in which these duties may be taught.

The guide offers resources for background and additional materials that can be used in the training program. The person using this guide should select those subject areas or portions of those subject areas that best meet his needs—that is, the needs of the residents and the needs of the institution. Additions and deletions by each instructor are expected.

The guide should act as stimulus for the establishment of training programs for newly employed attendants and will serve as a source of information for the development on on-going in-service training.

SOME EXPECTED OUTCOMES FROM TRAINING

In the training process an organization seeks, in a well planned manner, to develop in its employees the skills and attitudes necessary to provide for the highest level of performance in accordance with the aim of the institution.

While training is not the cure-all, there are several benefits to be derived from organized and well-thought-out courses of instruction. Such benefits may include some or all of the following:

- Improvement in the quality of service and care given to the residents.
- Improvement in the quantity of service and care given to the residents.
- Reduction in costs.
- Reduction in accidents.
- Reduction in absenteeism.
- Reduction in turnover.
- Improvement in staff morale.
- Improvement of attendants' status.
- Fixed duties, responsibilities and authority.
- Improvement of employee attitudes.
- Increased acceptance of institutional policy by attendant.

SOME FACTORS IN THE DEVELOPMENT OF THE TRAINING PROGRAM

In establishing a formal training program there are some important practical problems that need to be considered early in the planning. Unless these factors are carefully developed much of the effectiveness of training may be lost.

Determine the need for training.

Statement of objective; what specific outcomes are to be expected.

Who will be taught.

What subject matter specifically is to be taught.

Determination of time and duration.

Selection of the person to give the training.

Qualification of the instructor

Related experience

Knowledge of the subject matter

Acceptable manner of presentation

Ability to review and coordinate thinking of group

Ability to select appropriate teaching material

Source of instructor

Institution staff members

Outside agency representation

Provide satisfactory environment and materials.

Determine method or methods to be used in training.

SOME BASIC PRINCIPLES OF LEARNING

There are some basic laws of learning that should be understood by the user of this manual. These fundamental principles are applicable to almost any instructor-learner relationship, large group or small, elementary or advanced, classroom or on the job, formal or informal.

Attitude

The attitude of the learner toward his work goal will affect his interest in the program. There can be no genuine learning unless the interest and attention of the learner are captured and focused on the learning objective. It becomes important to the instructor to use methods and activities that will motivate and direct the interest of the student.

Participation

People learn by doing and by becoming involved. Student activity, visits, demonstration and so forth, suggested in the guide are based upon the awareness of this principle. Activity, both mental and physical, should always accompany the learning process.

Repetition

Each student should be given the opportunity to practice his skill until the skill becomes habitual. This is based upon the fact that repetition is necessary to develop initial abilities into well trained habits.

Application

Facts, ideas and principles become more meaningful as they are more widely and more often applied.

TEACHING METHODS

Inasmuch as a teaching method is a means of communication, the approach that the instructor uses to present his information is important. To be most effective a variety of methods should be used.

NOTE: Effective teaching largely depends upon the attention given by the instructor to the steps and techniques he uses in planning his area or areas of presentation.

A description of some teaching methods which may be used are:

Lecture The verbal giving of information; care should be taken not to over-use.

Discussion The exchange of ideas with learner participation. This technique usually is most effective when used with small groups probably not exceeding 12-15 class members.

Demonstration The presentation step of instruction; it must be organized logically and repeated as necessary.

Illustration A chart, diagram or picture assisting the learner in acquiring understanding and appreciation he may not get from words.

Questioning A method to stimulate thought and discussion by inquiry.

Trips and Visits The seeing of a procedure performed in its actual setting can be helpful; however, it may be time-consuming and of little value unless the learner knows exactly the purpose of the visit.

Visual Aids The use of movies, slides and film strips must be evaluated in terms of the subject matter and the purpose they are expected to serve in the learning process.

Directed Reading and Study Assigned reading will be helpful in gaining information and understanding. The instructor will have to gear his use of this technique to the abilities and interest of the class.

The Case Study This is a written description of some actual or hypothetical situation. The method trains the learner to identify and analyze complex problems and to form his own solutions. This method is best used with the more experienced attendants and should be handled in small groups probably not exceeding 12-15 people.

Role Playing The dramatization of working activities and situations. The participant takes the part of the person involved and acts in accordance with what he knows or feels. It emphasizes doing and not telling; however, its use requires careful organization, experience and leadership. Skillfully planned, it can be of value in teaching the attendant who has some experience.

The Outside Speaker A lecture by an experienced person who has considerable knowledge and insight about the subject. The speaker should be informed about the nature of the group. It is usually a good idea to discuss the presentation of the guest at the next training session in order to clear up possible misconceptions and to be sure that the correct applications and assumptions are made by the learner.

THE FOUR-STEP METHOD OF INSTRUCTION

The four-step process of instruction has good adaptability in the teaching of skills to attendants. This tried and proven method is suggested as follows:

Step 1—PREPARE THE LEARNER

Put them at ease
Find out what they know about the job
Create interest and the desire to learn

Step 2—DEMONSTRATE THE JOB TO BE LEARNED

Tell, show, illustrate and question
Proceed with one important step at a time
Stress key points
Explain clearly, completely and slowly
Question and repeat
Be patient—use simple words

Step 3—APPLICATION

Have the students perform the job for you
Have them tell and show you
Have them explain the key points
Observe them and correct errors
Continue until you know they know

Step 4—TESTING

Put students on their own
Encourage questions and reporting of problems
Check often
Taper off close supervision as performance meets standards

ON THE JOB EXPERIENCE

Learning to perform the required duties in the actual work setting will constitute an important part of the attendant's training experience.

The trainee should not be placed in the cottage and be responsible for functions for which he has not been trained.

THE USE OF FILMS

The use of films has been found helpful in most training programs. Films may be obtained from several different sources:

- State film libraries
- Audio-visual department of universities and colleges
- Local offices of state health agencies
- National offices of professional organizations
- Commercial companies such as drug, cleaning, etc.
- Commercial film companies

The ordering and previewing of films

Films must be ordered well in advance of the showing date. Films should be previewed as a part of the lesson planning. The instructor should be able to relate the subject matter to the students.

The showing of films

Short films: Inform the class of the subject matter.
Point out areas that class should note.
Have class look for certain points and be able to answer questions about specific issues.

Longer films: Same as above.

Break for discussion at appropriate points.

Use of Films

Allow enough time for the film to be discussed. A film can provide a source for test questions.

The film should serve as additional information about a subject and is a good way to stress a point, a topic, or to provide material for discussion.

THE FILM IS PART OF THE TOTAL LESSON—THE TOTAL LESSON IS NOT THE FILM.

The Cost of Films

Many films can be obtained free of charge with the user paying only the postage.

Some sources make a nominal charge for handling and repair plus postage. Other agencies may charge as much as \$25.00 or more for certain films.

NOTE: A directory listing 16 mm. film libraries (public and private) is published by the Office of Education, U. S. Department of Health, Education and Welfare. The Education Program Service, Randolph, Wisconsin, publishes a guide listing free films.

THE USE OF THE MANUAL

EXPLANATION OF THE FORMAT

For the convenience of the instructor the suggested material is presented in an outline form utilizing four columns to the page.

The headings Subject and Purpose at the beginning of each section identifies the general area of interest and the reason for teaching this section.

Subheading identifies in detail the specific section under a general topic.

Suggested Content contains suggested material on a particular subject. The instructor will, however, have to adapt this to the needs of his course.

Suggested Teaching Methods identifies methods that may be used in the presentation of material.

Some teaching methods such as lectures, discussion, visual aids, etc., are offered. Other methods may be adapted from those listed on page IV of the introduction.

Reference contains sources for obtaining supportive material and additional information on the subject. Every effort was made to use books, pamphlets, brochures or films that are current and available. It is realized that some of the references cited may have been discontinued or replaced by newer material. It is partially for the reason of remaining current that a list of associations, organizations and agencies is included in the appendix.

THE TRAINING RECORD

In order for the trainer to know the progress of the attendant it may be necessary to keep an accurate record of individual accomplishments. Such a record would indicate satisfactory accomplishment and point to the need for re-emphasizing certain content.

The record could indicate the following:

- The attendant's name
- The duty to be performed
- Approval given for duty performed by supervisor or instructor
- The need for additional training
- The name or initial of the trainer or supervisor

COURSE CONTENT

PART I

SUBJECT: BACKGROUND ON MENTAL RETARDATION

1

PURPOSE: To provide the attendant with some basic information, history and background on mental retardation.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|---------------------------------|--|---|---|
| Commentary | <p><i>Mental retardation may be defined as a state of incomplete mental development always existing since the time of birth or shortly thereafter. The mentally retarded are individuals with needs, wishes, hopes and behavior that, in many ways, are not different from people in general. However, their condition does set the limits that their abilities, interests and skills may reach. It is for this reason that the retardate require guidance and supervision in their attempts to meet their basic social, physical, emotional and economic needs.</i></p> <p><i>The amount of assistance required depends largely upon the degree of retardation. The retarded are often grouped into three categories: the <i>High Grade</i> who are mildly retarded and educable, the <i>Middle Grade</i> who are moderately retarded and trainable and the <i>Low Grade</i> who are severely retarded and custodial.</i></p> <p>The attendant in the institution for the mentally retarded may encounter residents representing all three grades—some of whom will be multi-handicapped.</p> <p>It is important to remember that mental retardation cuts across all lines including race, creed, color and income of parents, and as a serious mental condition it affects huge numbers of people. In fact, it has been estimated that there are well over three million mentally retarded people in the United States or, to express it differently, two to three percent of all children born today are eventually recognized as being retarded.</p> <p>In some cases, doctors are able to explain why a particular child is retarded. But no one has been able to find out all the reasons causing mental retardation. Science today suspects over seventy diseases or mishaps as playing a part in causing retardation.</p> <p>The chief causes of mental retardation are <i>organic</i> and <i>natural</i>. <i>Organic</i> cases are those in which there is physical brain damage prior, during or after birth. The majority of cases of mental retardation are <i>natural</i> in the sense that they are not caused by disease or injury. The so-called <i>natural</i> mentally retarded person is one born with a mental capacity considerably less than average.</p> <p><i>Mental retardation is an important social and educational problem in the United States today. As mentioned above authorities place the number of recognized retardates in this country at well over the three million mark. But still there is considerable misunderstanding and misinformation about the subject. A review of many textbooks on mental retardation published after World War II will illustrate the degree of enlightenment that has come about in a few short years.</i></p> | <p>Film Lecture Discussion Book Pamphlet</p> <p>Book</p> <p>Report</p> <p>Book</p> <p>Lecture Discussion Pamphlet</p> <p>Book</p> <p>Pamphlet</p> | <p><i>Children Limited</i></p> <p><i>The Mentally Retarded</i>, Chapter One <i>The Child Who is Mentally Retarded</i>, pp. 9-11</p> <p><i>Mental Retardation</i>, p. 374 <i>Factors Influencing the Institutionalization of Mentally Retarded Individuals in New York City</i></p> <p><i>The Mentally Retarded</i>, p. 2</p> <p><i>The Mentally Retarded in Society</i> <i>Social Disorganization</i>, Fourth Edition, p. 269</p> <p><i>New Hope for the Retarded Child</i>, p. 7</p> <p><i>Baby and Child Care</i>, p. 587</p> <p><i>Facts and Fancies About Mental Deficiency</i></p> |

BACKGROUND: Cont.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|--|--|--|---|
| <p>Myths about Mental Retardation (Cont.)</p> | <p>Literature tells us that the mentally deficient have been recognized since early time. The methods of handling the problem, however, have varied from persecution to reverence to indifference and then to concern and treatment.</p> <p>It was not until the beginning of the nineteenth century that the first education and medical approach of a definitely scientific character was applied to the problem. This was brought about with the capture of a naked lad who for years had been roaming the woods in France like a wild animal. Taken to a number of institutions and mental hospitals in Paris in the year 1799, this youngster underwent considerable observation and study. Linked with the research of such famous men as Drs. Jean Itard and Philippe Pinel, this case stimulated world-wide attention and is now referred to historically as "The Savage of Aveyron."</p> <p>Meeting with much resistance, small groups all over the world nevertheless started experimenting with ideas and concepts that might better the relative position of the mentally retarded in society. Concerned with setting up adequate shelters and in gaining some understanding of the subject, these groups gradually obtained success.</p> <p>Authorities now know that the mentally retarded probably have no more criminal tendencies than the normal population. They know that the mentally retarded are not predetermined sex delinquents. And, most important, authorities now recognize that almost all retardates can be trained and educated to some degree. It is advanced thinking of this sort that has more recently given rise to the public and private institutions whose fundamental purpose is that of training rather than mere custodial care.</p> <p>Developing out of a philosophy that each and every mental subnormal has a right to education and training according to his potential, the popular attitude toward the retardate is beginning to swing in a more positive direction. It is upon fact rather than fiction that emphasis is now being placed.</p> <p>Some children are born with certain unusual physical conditions, such as mongolism, which almost always means that they will be mentally retarded to some degree.</p> <p>Most people who are mentally retarded, however, do not have obvious physical defects. The mentally retarded, like anybody else, may or may not suffer from a physical ailment or mental illness. Retardation is a mental limitation and not a disease. However, an experienced person may suspect mental retardation in a particular child because of certain observed characteristics. For example, an experienced mother may note that her youngster is less active than average, lacks physical coordination and is not developing mentally at the rate of many other children of the same age. But even in such a case as this it would take a trained psychologist to diagnose the child accurately as being definitely retarded mentally.</p> <p>As for specific characteristics of the retarded—other than aspects of mental slowness—professionals are not in complete agreement. Perhaps some of this lack of agreement is due to the present undeveloped state of the field itself. To date, though, we have been able to remove some of the more obvious misconceptions. We know, for example, that the retarded are not born with a so-called "criminal streak" in them and that they do not ordinarily look retarded.</p> | <p>Book</p> <p>Lecture</p> <p>Discussion</p> <p>Book</p> <p>Book</p> <p>Pamphlet</p> <p>Book</p> <p>Pamphlet</p> <p>Lecture</p> <p>Discussion</p> <p>Monograph</p> <p>Article</p> | <p><i>The Mentally Retarded in Society</i>, pp. 8-10</p> <p><i>The Mentally Retarded in Society</i> (See Chapter II) "From Society to Science"</p> <p><i>Social Disorganization</i>, Fourth Edition, p. 280</p> <p><i>How Retarded Children Can Be Helped</i></p> <p><i>Mental Retardation</i>, pp. 574-580</p> <p><i>The Child Who Is Mentally Retarded</i>, pp. 6-7</p> <p><i>The Adjustment of Severely Retarded Adults in the Community</i></p> <p>See, for example, <i>American Journal of Mental Deficiency</i>, May 1962, pp. 849-852</p> |
| <p>Characteristics of the mentally retarded</p> | | | |

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|---|---|--|---|
| <p>Characteristics of the mentally retarded (Cont.)</p> | <p>With only a small percentage of the retarded in institutions, it is understandable that some, if not most of the institutionalized are multi-handicapped people whose condition is not that of mental retardation alone.</p> | <p>Book</p> | <p><i>The Mentally Retarded</i>, Chapter Three, "Characteristics of the Mentally Retarded"</p> |
| <p>Hope for the mentally retarded</p> | <p>The fundamental problems of mental retardation such as possible future prevention and the development of medical and chemical cures are the primary responsibility of scientific research but everyone and particularly the attendants in our institutions for the mentally retarded can contribute simply by becoming better informed about the entire subject.</p> <p>For most of the mentally retarded today there is no known cure, and medical science, as yet, has not found a way to restore or replace brain cells that have been injured, destroyed or born in an undeveloped state. However, this does not mean that we cannot offer the retarded, in our institutions and in the communities, considerable help and treatment. Although a few retardates will have to be completely taken care of all their lives, many can be trained to care for their own personal needs, read and write a little—and possibly perform useful, self-sufficient tasks during adulthood.</p> <p>For many of the institutionalized retardates we can offer a combination of <i>care, training and education</i>; <i>care</i> in terms of providing them with food, shelter, medical treatment and an adequate social environment; <i>training</i> in terms of offering them the opportunity to learn simple techniques and operations; and <i>education</i> in the form of intellectual stimulation geared to their individual level of development.</p> <p>While many specialists are provided at most institutions it must be remembered that it is the attendant who sees and is with the resident on a twenty-four hour 365-day a year basis.</p> | <p>Lecture Discussion</p> <p>Monograph</p> <p>Booklet</p> <p>Booklet</p> <p>Book</p> <p>Film Booklet</p> | <p><i>Prognosis of Mental Subnormals</i>, pp. 1-5</p> <p><i>The Backward Child</i>, pp. 6-7</p> <p><i>The Retarded Can Be Helped</i></p> <p><i>The Child Who Never Grew</i></p> <p><i>Tuesday's Children</i> <i>Cottage Parents</i></p> |

GROWTH AND DEVELOPMENT

PURPOSE: To inform the attainment of the growth and development of individuals.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-----------------------------------|--|---|---|
| Commentary | <p>This section attempts to provide a background on growth and development to be used as a means of comparison and for reference. Only the high points commonly found at the various periods of growth and development are mentioned. It must be understood that exceptions around these points are common.</p> <p>It is suggested that the content in this section be presented by a clinician.</p> | Pamphlet (<i>For general information</i>) Pamphlet | <i>Enjoy Your Child</i> , pp. 1, 2, 3 <i>Understand Your Child from 6 to 12</i> |
| Physical Growth | <p><i>Rates of growth vary considerably</i> both for individuals and for particular parts and functions. When a child reaches adolescence growth varies quite considerably. There are a number of systems used in measuring development:</p> <ul style="list-style-type: none"> Skeletal age Dental age Morphological age—size, height, etc. Secondary sex characters <p>The periods listed here should be taken as very broad and overlapping categories:</p> <ul style="list-style-type: none"> Early childhood period: <ul style="list-style-type: none"> accelerated rate of growth Late childhood period: <ul style="list-style-type: none"> rate of growth is irregular rate is slower than in early childhood period Adolescence: <ul style="list-style-type: none"> spurts of growth marked changes over short periods of time Late adolescence: <ul style="list-style-type: none"> physical maturity is completed during this period many of the less obvious changes are taking place the 'filling out' period | <p>Pamphlet</p> <p>Book</p> <p>Use of Wetzel Grid (to demonstrate examples of individual growth patterns)</p> | <p>The Three R's</p> <p><i>Growth and Adolescence</i>, Chap. I & IV</p> <p><i>Wetzel, W. C.</i>, pp. 149-154 <i>Child Study</i>, pp. 319-324 <i>Child Study</i>, pp. 488-493 <i>Child Study</i>, pp. 651-652 Also see: <i>The Child from 5 to 10</i>, pp. 222-237</p> |
| Motor Development (Define) | <p><i>Early childhood:</i> Period of "large muscle" activity Activities have little organization</p> <p><i>Late childhood:</i> Small muscle activity developing Beginning of hand-eye coordination Many new areas of interest</p> | <p>Lecture Give examples from everyday life Book Film</p> | <p><i>Child Study</i>, pp. 155-160 <i>Children's Play</i></p> |

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|------------------------------|--|--|---|
| Motor Development (Cont.) | <p><i>Adolescence:</i> Development of fine motor coordination Gross motor skills approaches maximum level—more advanced than mental or social motivity</p> <p><i>Late adolescence:</i> Fine motor coordination reaches its maximum</p> | <p>Use of scales to demonstrate, Osertsky Scale (Lincoln adapt) use of data from Sloan for comparison of retardates and normal may be helpful Book</p> | <p><i>Growth and Adolescence</i>, Chap. VIII</p> <p><i>Osertsky Motor Development Scale</i></p> |
| Sensory and Perceptual | <p><i>Sensory and perceptual development</i> is conditioned by both physical and motor development, with irregularities in one way may create irregularities in the other—This area covers:</p> <p>Visual Factual Kinesthetic impression</p> <p><i>The areas of taste and smell</i> are not of major importance for behavior at this point—usually they are more important in adulthood—for auditory development see section on speech</p> <p>Early childhood: Identification is through the structure of a thing—form concepts perceived before color concepts Attention span is shorter during the younger years and develops with age</p> <p>Late childhood: <i>Space, distance and position concepts develop here</i></p> <p>Adolescence and early adulthood: Basic sensory and perceptual development achieved Perceptual accuracy is now highly influenced by social, emotional and intellectual development</p> | <p>Book</p> <p>Discuss the relationship of these areas to others</p> | <p><i>Child Psychology</i>, pp. 207-209</p> |
| Language Concepts | <p><i>Language</i> may be both vocal and non-vocal—usually the vocal is necessary not only for communication but for social, emotional, and intellectual development</p> <p><i>Hearing development</i> is primary to speech development</p> | <p>Discussion: Indicate non-verbal examples of communication—repeat caution as to the marked irregularity of speech during childhood Book</p> | <p><i>Child Psychology</i>, pp. 209-224, 231-234</p> <p><i>Child Study</i>, p. 169</p> <p><i>Your Children's Play</i></p> <p><i>The Child from 5 to 10</i>, pp. 438-443</p> <p><i>Child Psychology</i>, pp. 335-339</p> |

GROWTH AND DEVELOPMENT: Cont.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|----------------------------------|---|---|--|
| Language Concepts (Cont.) | <p><i>Early childhood:</i> Marked irregularity as to beginning and extent of speech with early speakers and late speakers Child's first speech is mostly about himself First words are 'thing' words Nouns, verbs, adjectives, and pronouns develop in that order Repetition of words common Girls usually develop somewhat earlier than boys</p> <p><i>Later childhood:</i> Extent of vocabulary and type of vocabulary are influenced by experience and mental ability Speech becomes less self-centered, more 'other' centered Period of questioning "why" questions</p> | <p>Book</p> <p>Film</p> | <p><i>Child Psychology</i>, pp. 357-358 <i>The Child from 5 to 10</i>, pp. 444-454. <i>Answering the Child's Why</i></p> |
| Social Development | <p><i>Adolescence:</i> Language patterns highly influenced by social values and experiences Period of special group language Language used as means of showing group membership</p> <p><i>Late adolescence:</i> Language reflects social-emotional development Less use of adolescent patterns, more emphasis upon adult speech</p> <p>It is difficult to separate <i>theories of social development</i> from theories of personality. Some of the determinants of social development are: Early socialization experiences Home (institution) atmosphere Cultural values</p> <p><i>Early childhood:</i> Most relationships are home-centered. Influence is primarily from the home, the social world is the home. Strong need for approval, little relationship between own behavior and approval Property rights usually not established, "everything is mine" attitude</p> <p><i>Late childhood:</i> Influence from outside the home effect the child Entrance into school a critical period of transition Shift in interpersonal relationships—child now lives in two "worlds." Chum relationships and preference for own sex Social choices based upon personal preferences rather than adult preferences</p> | <p><i>Demonstrate the 'secret' language and expression of teenagers</i></p> <p>Book</p> <p>Lecture Book</p> <p>Film</p> <p>Book</p> | <p><i>Child Psychology</i>, pp. 364-370</p> <p><i>Child Psychology</i>, pp. 447-450</p> <p><i>Social Development</i> (An analysis of social behavior at different age levels—behavior patterns—conflicts between the home and the gang, etc.) <i>Child Study</i>, p. 355</p> |

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-----------------------------------|---|---|--|
| Social Development (Cont.) | <p><i>Adolescence:</i> Peer—(friends, like in age, etc.) groups are primary source of influence—many cliques Conflict between friend groups and adult standards A period of strife in adjustment—Period of intense fads, copying in dress and manners Sex and social interests are interrelated Interest in social skills are major</p> | Scale | <i>Vineland Social Maturity Scale</i> |
| | <p><i>Later adolescence:</i> Social discrimination increases More acceptance of adult models as social standards Social activities are separated from other areas A more careful selection of friends or groups</p> | Book | <i>Child Study</i> , pp. 647-649, 654-657 |
| Values | <p><i>Values</i> in this context are used as frames of reference which influence behavior Values act as anchoring points from which experiences may be evaluated Values increase in range and variety with age, education and social experiences</p> | Lecture—(point out how values, morals and character are interrelated, discuss the variation in standards) | |
| | <p><i>Early childhood:</i> The child's values are those of his parents Parental limits are both moral and social limits Acceptable behavior and 'right' behavior are the same—emphasis is more on 'wrongs', 'no's being learned before 'yes'</p> | Book | <i>Child Psychology</i> , pp. 552-559, 566-579 |
| | | Book | <i>Child Study</i> , pp. 352-353 |
| | | | <i>Child Psychology</i> , pp. 557-560 |
| | | | <i>Child Study</i> , pp. 529-531 |
| | <p><i>Late childhood:</i> Own values begin to develop—separation of own from parental values—period of "why" Still a strong emphasis upon absolutes</p> <p><i>Adolescence:</i> Period of strong conflict between adult and childhood values Attempt to make the ideals of childhood a reality Adolescent tries to live with two value systems, those of his friends and those of adults Poorly developed values at earlier stages are magnified now Value conflicts find more outlets for expression now—what is antisocial from adult standards and values is not necessarily seen as antisocial from adolescent or friend group values</p> | Lecture Discussion | <i>The Years from 10 to 16</i> , pp. 472-483 |

| Values (Cont.) | <i>Late adolescence:</i> General acceptance of cultural values and standards Differences between one's own and society's values are more generally accepted The individual is usually aware when he is doing wrong | Book | <i>Child Training and Personality</i> , Chapter XI |

SUBJECT: UNDERSTANDING THE BASIC SOCIAL AND EMOTIONAL NEEDS OF THE RESIDENT.

9

PURPOSE: To assist the attendant in recognizing the importance of helping the resident to gain and maintain acceptable behavior and self-confidence.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-------------------|---|-------------------------------------|---|
| Commentary | <p>Most retarded children can be taught socially desirable behavior and basic emotion control. In an institution the attendant can do a great deal in terms of this fundamental training.</p> <p>In carrying out his daily responsibilities the attendant becomes very personally involved with the resident in his cottage or unit.</p> <p>It is important for the attendant to know how to use this relationship to the best interest of the resident. For example, it may be much easier for the attendant to teach good grooming and acceptable manners to the resident if he himself presents a good appearance and develops good manners. The attendant sets the example in many ways.</p> | Lecture Discussion Pamphlet | <i>The Child Who Is Mentally Retarded</i> |
| Social Behavior | <p>The way a person behaves when he is with others is very important</p> <p>To a large extent we judge people by their social behavior</p> <p>Social behavior is learned behavior brought about by experience and training</p> <p>The majority of the mentally retarded can be taught the simple rules of etiquette</p> <p>A few examples of what the attendant might encourage the resident to do:</p> <ul style="list-style-type: none"> Breathe through nose—thus keeping lips together while not talking Look at people while engaging in conversation Refrain from inserting fingers in ears, nose and mouth while in presence of others Do not touch personal parts of body while others are present Maintain a pleasant disposition Be careful about dress so as not to cause embarrassment to self and others—see that all buttons are buttoned and that zippers are zipped | Lecture Discussion | |
| Emotional Control | <p>As a child's world begins to expand there is, ordinarily, a desire to participate in it and to make more and more decisions himself</p> <p>Restriction in action and/or decision making may mean frustration</p> <p>Hence, it is not uncommon for a youngster (even before the age of two) to display a temper spell when he is not permitted to have his own way</p> <p>The capable attendant will not directly oppose the child who shows a temper, but rather, will guide and direct him accordingly</p> <p>The display of considerable attention (reading, talking and spending time with him) at other times will do much to reduce possible periods of frustration</p> <p>A hostile comment like "I hate you" expressed by the child should not be taken personally by the attendant</p> | Lecture Discussion | |

SOCIAL, EMOTIONAL: Cont.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|---------------------------|--|-------------------------------------|---|
| Emotional Control (Cont.) | <p>A child may learn to master his temper by being exposed to emotional habits set by the attendant, however, some expression of emotion is perfectly normal</p> <p>The person who is constantly restricted and reprimanded may develop complete resistance to all authority or react in the opposite manner thereby becoming sullen and duntrodden at all times.</p> <p>Opposition and simple emotional upset is best met by kindness rather than aggression. A certain amount of emotional upset—(<i>temper</i>) is entirely normal</p> | Lecture Discussion | |
| Fear | <p><i>Fear</i></p> <p>The purpose of fear is to protect us from emotional and physical hurt</p> <p>A fear may develop from a simple immediate cause (such as the banging of a door) or it may stem from a complex situation deeply rooted in the past</p> <p>Whatever the cause, a fear should always be treated with respect and consideration</p> <p>A fear may be "silly" to someone else—but is very real to the one who has it</p> <p>Deep, disturbing fears should be handled with care and, if necessary, professional treatment</p> <p>An environment that provides security and understanding tends to minimize simple fear and anxiety</p> <p>The capable attendant is one who exercises understanding and good judgment</p> | Book Pamphlet | <i>The Retarded Child</i> , p. 40 <i>Fear—What Makes My Child Afraid and Nervous?</i> |
| A Happy Environment | <p>The amount of love and affection a child receives from those around him is viewed as playing an important part in his development</p> <p>An atmosphere that radiates affection will generally encourage the resident to respond in a more satisfactory manner</p> <p>A happy and understanding home life—be it in an institution or in the community—tends to provide one with a feeling of security and self-worth</p> <p>Adjustment to occasional adversity or failure is more easily handled by one who has lived in a non-hostile environment</p> <p>With adequate patience and understanding, new ideas may be gradually introduced and desired changes brought about</p> | Lecture Discussion Book | <i>A Guide for Child-care Workers</i> |
| Shyness | <p><i>Shyness</i> is an evaluation of behavior</p> <p>Shyness often represents a normal reaction to an embarrassing or disturbing social situation</p> <p>Though the problem at hand may be of the simplest kind the individual involved may be unable to handle it.</p> <p>A certain amount of shyness is considered entirely normal</p> <p>Most children, at certain ages, experience a degree of shyness in the growing-up process</p> | | |

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-------------------------------|---|-------------------------------------|--|
| <p>Shyness (Cont.)</p> | <p>All people are not equally sociable—thus the degree of shyness varies from person to person In its simplest form shyness often stems from one or more of the following conditions:</p> <ul style="list-style-type: none"> New experiences Insufficient knowledge Insecurity Misunderstanding A hostile environment Lack of adequate training Unfounded criticism Humiliation and embarrassment <p>It follows that every resident—in all social situations—be treated with tact, consideration and understanding Should one, however, continue to display excessive shyness it may warrant a referral to a professional staff member</p> | <p>Lecture Discussion</p> | <p>See section: <i>When to Refer</i>, p. 93</p> |
| <p>Bedwetting</p> | <p><i>Repeated bed-wetting may be a symptom of an emotional upset or it may be caused by a physiological condition</i></p> <p>Regardless of the cause, individuals are often embarrassed by such behavior and sometimes attempt to deny the very act</p> <p>Ridicule of bed-wetting should never be permitted under any circumstances</p> <p>It is of vital importance that the attendant attempt to understand the resident's problems so that his feeling of anxiety may be reduced to a minimum</p> <p>If at all possible, the resident should be sent to bed in a happy and relaxed state</p> <p>It may be advisable that a bed-wetting resident refrain from drinking liquids after the evening meal</p> <p>All unsuccessful bed-wetting cases should be referred to a professional staff member</p> | <p>Book</p> | <p><i>The Professional Houseparent</i>, p. 197</p> |
| <p>Self-Confidence</p> | <p><i>Self-confidence and its development:</i></p> <p>Self-confidence is that quality which permits one to meet day to day experiences with a lessening measure of assistance and a degree of sophistication</p> <p>The possession of self-confidence is viewed as a highly desirable trait</p> <p>An environment providing emotional security is thought to foster the development of self-confidence</p> <p>The capable attendant can do much in strengthening the resident's feeling of self-confidence</p> | <p>Pamphlet</p> | <p><i>Building Self-Confidence</i></p> |

SOCIAL, EMOTIONAL: Cont.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|----------------------------|---|-------------------------------------|---|
| Self-Confidence (Cont.) | Generally speaking, a realistic attitude toward one's abilities and limitations should be considered but at the same time there should be recognition of achievements Even a small amount of praise when warranted will do a lot of good A ready smile of approval or a little pat on the back is sufficient encouragement in many instances Remember, the avoidance of ridicule is essential in the building of one's self-confidence And most important of all, <i>BE VERY PATIENT!</i> | Booklet | <i>The Backward Child</i> , see, "Your Praise Helps," p. 17 |

PART II

SUBJECT: HOUSEKEEPING IN THE COTTAGE

14/15

PURPOSE: To enable the attendant to create and maintain a clean, safe, pleasant, healthful environment.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|----------------------|--|--|---|
| Commentary | <p>The cottage is the home of the resident for his stay with the institution. Every effort should be made to create a comfortable and homelike atmosphere.</p> <p>The housekeeping function must be performed repeatedly according to the demand of the situation.</p> <p>The attendant is responsible for the appearance, the orderliness, the safety and the sanitary conditions within and around the cottage. With instruction, the resident may be able to assist with the housekeeping responsibility. This can be a valuable training experience for the resident.</p> <p>Special situations and areas need attention immediately. They should be handled by the attendant and not the resident, for example:</p> <p><i>Spillage of all kinds</i> Food, water, etc. Urine and other excreta Soap + Water + Hardwork = A clean cottage</p> <p><i>The wet mop:</i> Move furniture, sweep area Use clean mop Right hand—palm up, two inches from end Left hand—palm down, twelve inches down on handle Feet apart Place mop flat on floor three to four feet to left Move mop to right in an arc Mop strands should be spread out for maximum coverage Reverse direction, overlapping Develop rhythm Proper method will lessen fatigue (100 sq. feet can be cleaned with one application) Pull mop along edge of floor next to baseboard, six to eight inches to prevent splashing Rinse with clean water Remove mop from handle and wash in cleaning solution; wring out and hang to dry; place the mop head up Soak new mop head in hot water for 15 minutes to remove lint and to soften fiber.</p> <p><i>The use of the electric buffer</i>—buffing, polishing, scrubbing Check to see that all equipment is in good order Electric current to be used must correspond to that for which the machine is made</p> | <p>Lecture and class discussion</p> <p><i>The four-step method can be effectively used in teaching housekeeping skills</i> Bulletin</p> <p>Lecture with demonstration</p> <p>Return demonstration by student Construct chart to show coverage and direction of mopping procedure</p> <p>Film</p> | <p>See Chapter Three, <i>The House The Professional Houseparent</i></p> <p><i>New York Port Authority Cleaning Methods:</i> Lavatories, Window Washing, Floors</p> <p><i>Floor Care and Maintenance</i>, U. S. Government Bulletin No. 54 T</p> <p>Contact local hospitals and schools</p> <p>For additional information contact representative of cleaning products used by the institution</p> <p><i>Floor Show</i> Film and literature may be obtained from manufacturer of machine</p> |
| The Use of Equipment | | | |

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-------------------------------------|--|--|---|
| The Use of Equipment (Cont.) | <p>As brush is moved forward with right hand, thumb of left hand supports handle and fingers serve as guide—brush face should be flat on floor, weight is shifted from right to left foot gradually as stroke is ended</p> <p>At end of stroke, weight is on left foot and both arms are extended—tap brush on floor to free dirt—sixty-inch stroke is usually recommended if worker bends body and becomes fatigued, a shorter stroke will be performed</p> <p>To return brush to original position, lift it from floor and draw it back</p> <p>Motion should be continuous to develop rhythmic stroke</p> <p>Be sure bristles are pointed forward</p> | | |
| Care of Equipment | <p><i>All equipment should be inspected daily for cleanliness and signs of wear</i></p> <p><i>Establish a definite room for storage</i></p> <p><i>Care of brushes:</i></p> <p>Clean daily by combing with a nail brush to remove dust, threads, etc.</p> <p>Wash in warm cleaning solution and rinse in clear, warm water</p> <p>Do not use brush while wet or damp</p> <p>When not in use brushes should be kept off the floor</p> <p>Hang on nail or rack</p> <p><i>Care of broom: Hand and Push</i></p> <p>To prevent bristles from curling and to allow them to wear evenly reverse handles weekly on push broom</p> <p>Wash in cleaning solution, rinse in clear water and hang up with straw down; allow to dry thoroughly, using a wet broom will soften the straw and cause loss of shape</p> <p>Broom should always be hung</p> <p>Do not use broom for scrubbing</p> <p><i>Care of mop buckets:</i></p> <p>After use, rinse, wash and allow to dry</p> <p>Wipe outside to remove dirt</p> <p>Avoid rough handling</p> <p><i>Care of squeezees:</i></p> <p>After use wipe blade</p> <p>Keep in cool place away from fluids</p> <p><i>Care of sponge and chamois:</i></p> <p>Rinse thoroughly</p> <p>Do not twist or squeeze too vigorously</p> <p>Dry by air—avoid heat</p> | <p>Lecture Discussion</p> <p>Book</p> <p>Film</p> <p>Demonstration</p> <p>Book</p> | <p><i>Manual of Hospital Housekeeping</i> <i>Floor Show</i></p> <p><i>Manual of Hospital Housekeeping</i></p> |

PART III

SUBJECT: THE ATTENDANTS RESPONSIBILITY FOR TRAINING RESIDENTS

44/45

PURPOSE: To Help the Attendant to Meet His Responsibility for Training the Resident

| SUBHEADINGS | SUGGESTED CONTENT | AID & METHODS | REFERENCE |
|-------------------------------|--|--|---|
| Commentary | <p>One of the primary functions of the attendant is to train and teach the resident to improve his capabilities so that he may live more effectively within a particular society. The basic principles of teaching can and should be implemented when teaching those functioning below the normal expectancy. The retardate, although having specific learning and adjustment problems, does not negate the need for a systematic approach and sound procedures. The fundamental basic structure of training, applicable to the normal child, will remain relatively unchanged when working with the deviate.</p> <p>However, specific methods and techniques of training the retardate together with a basic understanding of their problems must be known in order to train effectively within the framework of formulated and established teaching practices.</p> | | |
| Principles of Training | <p>Residents must be motivated to learn before they will accept training.</p> <p>When training consider the individual needs of those being trained.</p> <p>The rate of training should equal the rate at which the individual can learn.</p> <p>Residents can learn by being told or shown how to work, but primarily from doing work under guidance.</p> <p>Training should be planned, scheduled, executed and evaluated systematically.</p> | Group or individual discussions pointing out values of learning particular tasks Refer to educational level of students A routine program will aid in your guidance Book: | Supervising People George Halsey |
| Getting Ready to Train | <p>THE ATTENDANT WHEN GETTING READY TO TRAIN SHOULD THINK ABOUT THE FOLLOWING.</p> <p><i>What</i> must be done; <i>why</i> is it necessary for the resident to do this job; <i>how</i> will this benefit the resident?</p> <p><i>How much</i> should be taught at one time.</p> <p><i>What</i> does the learner already know that is similar to make his job easier.</p> <p>On a particular job, consider <i>what</i> task should be taught first, second, etc.</p> <p>Do not teach in an artificial situation, teach in the actual job situation.</p> <p>When training remember that all students are different, and we must consider their particular needs.</p> <p>Remember to check and re-check to see if the learner has learned what was taught.</p> <p><i>What</i> methods and teaching tools will be best to use, such as:</p> <p>Lecture Demonstrations Illustrations Discussions Experiment—planned by teacher</p> | Manual: Evaluate job, and resident with whom you are working Plan job analysis and breakdown of tasks Have resident do the work—on the job Acquire all pertinent material concerning student test—on the job | <i>Job Instructor Manual.</i> Office of Industrial Resources |

THE ATTENDANTS RESPONSIBILITY FOR TRAINING RESIDENTS: Cont.

| SUBHEADINGS | SUGGESTED CONTENT | AID & METHODS | REFERENCE |
|--|--|--|---|
| <p>Getting Ready to Train (Cont.)</p> | <p>PLANNING IS IMPORTANT You must Select content Prepare content Put it over Get it used</p> | <p>Refer to reference material Organize your work Use specified teaching tools and methods</p> | |
| <p>Training Steps</p> | <p>THE FOLLOWING STEPS ARE BASIC TO ALL SOUND TEACHING</p> <p><i>First Training Step (Preparation)</i> Put the learner at ease with a friendly, informal encouraging comment. Make the learner want to know, by showing what the knowledge and skill will do for him. Use praise rather than criticism as an incentive. There will always be something that can be praised.</p> <p><i>Second Training Step (Demonstration)</i> Start with the known. Lead into the unknown. This captures attention and gives the learner confidence. Teach the simple first, lead up to the complicated. This prevents discouragement and provides a challenge. Keep the explanation to the point. Telling of unrelated incidents distracts attention. Give a reason for each step. Knowing why increases probability of remembering. Demonstrate by doing correctly and exactly what the learner will be asked to do. Go slowly, be sure the learner sees and understands each step. Encourage questions, check and repeat.</p> <p><i>Third Training Step (Application)</i> Try out learner's knowledge and skill and correct deficiencies—Learner repeats lesson. Give the learner an opportunity to demonstrate the operation. Keep the learner informed of his progress. He does better work when he knows that he is improving. Correct errors. Decrease amount of supervision. Allow the learner to perform independently as soon as he is able.</p> <p><i>Fourth Training Step (Testing)</i></p> | <p>Pamphlet: Discussion of the job and an explanation of its importance</p> | <p>The Development of a Job Instructor Training Program for Institutional Service Workers</p> |
| | <p><i>Follow Up</i> Check to see how well the information is used. Supply further on the job coaching when needed. Have learner work independently. <i>Remember:</i> Training has been futile unless the learner uses what he has learned. <i>Remember:</i> If the learner hasn't learned, the teacher hasn't taught.</p> | | |

|--|--|---|--|
| <p>Concepts and positive approaches of training the retarded</p> | <p>IN ORDER TO BE EFFECTIVE IN APPLYING THE FOUR (4) BASIC TRAINING STEPS TO THE RESIDENT THE ATTENDANT MUST UNDERSTAND AND CONTINUALLY BE AWARE OF THE FOLLOWING:</p> <ul style="list-style-type: none"> * Be alert for signs of readiness. How mature a child is in a certain area plays a large part in determining whether or not a child is ready and able to perform a certain task. * The learner must be observed carefully before any method of training is started. * Be aware that growth in all areas is not consistent. * The learner should have enough time to learn each bit of desired behavior. * The resident's personal needs should be understood from his peculiar behavior and corrected objectively. * Understand the resident's behavior in the light of his stage of development. * Set up realistic goals. * The learner should be given sympathetic support while learning. * Have confidence in the individual. * Choose proper stimuli to produce correct responses. * Be consistent in the training. * Training must be consistent to be effective. Approval should be loud, disapproval soft with emphasis on the deed, not the child. * Consistent training is conducive to obedience. A learner will not learn to obey if obedience is insisted upon on some occasions and not on others. * Knowing why the child behaves in an unacceptable manner does not imply that such behavior should be condoned. * Firmness is not synonymous with punishment. Trainer must work with the resident in a stable, confident manner. * Establish limits of behavior. Resident must know how far he can go and what is expected of him. * Planning and structure can reduce considerably the need for external control. * Activities should be arranged to minimize chaos. * Do not train in distracting surroundings; simplify the environment. * Do not assume that a skill learned in a particular situation will be transferred. * Introduce one skill at a time, do not push beyond his capabilities. * The learner needs many successful repetitions for him to acquire certain skills. * Help the resident experience as many successes as possible. * Spell out what is expected "step by step." * Avoid comparison with others. * Do not give smothering attention; build up sense of personal worth. * Praise the learner for small amounts of progress. * Whatever the tasks, they will eventually become habitual if the learner can see and feel tangible evidence of accomplishment. * Trainers attitudes and feelings are often reflected in the resident. If worker is tense, easily upset and inconsistent, the learner will mirror these attitudes and perform erratically. If the trainer is calm, stable and consistent the learner will respond in a positive manner. | <p>Books:</p> <p>Learn particular levels of residents</p> <p>Evaluate each student individually</p> <p>Check records and evaluations of residents</p> | <p>You and Your Retarded Child Kirk, Karnes and Kirk.</p> <p>Helping our Brain Injured Child Ernest Siegel, M.A.</p> <p>The Mentally Retarded Child Abraham Levinson</p> |

SUBJECT: THE RESPONSIBILITY OF THE ATTENDANT FOR CLOTHING

53

PURPOSE: To understand the procedure and need for clothing control.

To assure the proper appearance of each resident.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-----------------------------------|---|--|---|
| Commentary | <p>The proper appearance of the resident is a primary concern and responsibility of each cottage employee. A presentable appearance not only provides a certain lift to the individual but it reflects directly the quality of care and interest maintained at the cottage life level. It is the responsibility of the attendant to see that those entrusted to his care have the feeling of well-being and elevated dignity that comes from a good appearance.</p> <p>The attendant, when necessary, will assist the resident with dressing and may select the articles of clothing to be worn.</p> <p>Because the attendant is seen as an example by the resident he, the attendant, must always present a good appearance.</p> | Lecture Discussion | For proper dressing and appearance, refer also to sections on <i>Personal Health and Hygiene</i> and <i>The Social-Emotional Needs of the Resident</i> Clothing policy of the institution <i>The Backward Child</i> , Chapter two |
| Institutional budget for clothing | <p><i>Clothing budget:</i> For the institution For each resident</p> <p><i>Need to economize:</i> Emphasize the proper care of clothing</p> | Booklet Chart — Showing clothing allotment to institution and to individual | Institution budget |

SUBJECT: BASIC NURSING CARE OF THE RESIDENT

PURPOSE: To give the attendant knowledge of basic nursing skills and first aid measures necessary for him to fulfill his responsibility for the care of the resident under his supervision.
To create an awareness of the importance of observing and reporting signs and symptoms of conditions that need medical attention.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|--|--|--|--|
| Commentary | <p>Most of the actual medical treatment of residents will be done by a professional nurse or other trained and authorized medical persons. It is, however, very important that the attendant be able to recognize signs and symptoms of conditions in order that the resident may be referred to a medical authority for the proper care.</p> <p>The teaching of the standard Red Cross First Aid course by qualified personnel is a suggested requirement for all newly hired attendants.</p> <p>The following suggested content should be presented under the direction of a registered nurse.</p> <p><i>The attendant must be observant for any abnormality in the resident such as:</i></p> <ul style="list-style-type: none">RednessSwellingsCutsBruisesDiscoloringPimplesRashesAbnormal discharges including menstruationPain—anywhere in bodyConstipation or diarrheaBackacheNausea and vomitingLoss of sleepWeight change—<i>too much gain or loss</i>Stiff neckChange in appetite <p><i>Conditions may change due to:</i></p> <ul style="list-style-type: none">AgeSexActivitySeasons of the year | <p>Lecture Discussion</p> <p>Film</p> <p>Discussion: <i>What is abnormal? What is a change? When should medical authority be called?</i></p> | <p>Contact local Red Cross Office to obtain qualified instructor <i>First Aid—Part I</i> <i>First Aid—Part II</i></p> <p>Policy of the Institution</p> |
| Observation of Signs and Symptoms | | | |
| Control of a Nose-Bleed | <p><i>Nosebleed may be due to:</i></p> <ul style="list-style-type: none">Irritated mucus membrane in the noseTo a chronic inflammationTo a blow on the head | <p>Lecture Discussion</p> | |

|---------------------------|--|-------------------------------------|-------------------------------|
| Foreign Bodies in the Ear | <i>Foreign bodies in the ear require the attention of a doctor</i> <i>Do not attempt to remove</i> <i>Obtain medical attention</i> | Book | <i>Red Cross First Aid</i> |
| Objects in the Nose | <i>To remove object from the nose, close other nostril and blow gently</i> | Demonstration | |
| Swallowing Objects | <i>If resident swallows object:</i> It may do no harm depending upon nature of object Do not attempt to treat— <i>call medical authority immediately</i> | | |
| Treatment of Shock | <i>Definition:</i> A deep disturbance of general body function with evidence particularly of disturbed circulation of the blood <i>Result from:</i> Serious injury Deep emotional upset <i>Occur:</i> Shock may occur immediately or may be delayed for some time after an accident or incident <i>Appearance:</i> Weak and pale Skin clammy Beads of perspiration on upper lip and forehead <i>What to do:</i> Victim—lie flat, feet raised 12-18 inches Adequate cover to maintain body temperature Avoid overheating or chilling <i>Do not give fluids to unconscious person</i> <i>Handle gently</i> <i>Call for medical assistance</i> <i>Shock may open way for pneumonia and other complications and may be fatal</i> | Lecture Book Discussion | <i>Red Cross Home Nursing</i> |
| Heat Exhaustion | <i>Cause:</i> Lack of salt in body <i>Signs and symptoms:</i> Skin is pale, clammy Beads of perspiration on upper lip and forehead Eyes are vacant and lack luster | Book | <i>Red Cross Home Nursing</i> |

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|---------------------------------------|---|-------------------------------------|-------------------------------|
| Heat Exhaustion (Cont.) | <p><i>What to do:</i> Victim should lie down Good circulation of air <i>Call the doctor</i> If conscious—salt water—1 teaspoon to 1 glass of water 5-10 minutes Cover lightly</p> <p>NOTE DIFFERENCE FROM SUN STROKE</p> | | |
| Sunstroke and Heatstroke | <p>The attendant must <i>closely supervise the resident who is working or playing in the hot sun</i> to prevent the possibility of a sunstroke</p> <p><i>Appearance of victim:</i> Rapid full pulse, dry skin Face flushed Resident may become unconscious</p> <p><i>What to do:</i> Remove to cool shady place Remove clothing, sponge body with cool water Do not give stimulant</p> <p><i>Residents on medication are more susceptible to the harmful effects of the sun</i></p> | Lecture and discussion | |
| Loss of Consciousness and Fainting | <p><i>What to do:</i> Have resident lie down or place head between his knees When conscious give hot coffee or tea <i>Call medical help if not recovered quickly</i></p> | Demonstrate Lecture | |
| Convulsion | <p><i>Convulsions come on suddenly</i></p> <p><i>Require prompt medical treatment</i></p> <p><i>Caused by:</i> Head injury Internal disturbance Infection such as lockjaw and meningitis In babies convulsion can be caused by digestive disturbance, fever, nutritional deficiencies, injury and infections</p> <p><i>Symptoms:</i> Muscular twitchings, first on face and later on arms and legs, head may be drawn back, weight of body may rest on head and back, face pale then becomes bluish, <i>call for medical assistance</i> Relief: Place child in a warm bath or in blankets</p> | Book | Red Cross Home Nursing, p. 94 |

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-----------------------|---|---|--|
| Convulsive (Seizures) | <p><i>Epileptic convulsions:</i></p> <p>The resident: Pale or bluish tinge May fall to ground Unconscious</p> <p>May be incontinence of urine or feces May have violent muscular movements Do not restrain but prevent injury to resident It may be necessary to protect tongue by placing stick or wadded paper between his teeth After seizure, allow patient to sleep undisturbed</p> | Film | <i>Epilepsy</i> |
| Convulsive Epileptic | <p><i>Grand mal seizure</i>—severe form of the above characteristics Major seizure—most severe Convulsive movement of entire body Often preceded by symptoms called <i>aura</i> Loss of consciousness</p> <p><i>Petit mal seizure</i>—mild form of the characteristics listed Small or minor seizure Temporary loss of consciousness lasting 5 to 30 seconds</p> <p>Types May be immobile, rigid or simply stares Only a sudden loss of posture control, may only jackknife Only a quick jerk of the head, arms, or trunk muscles, without loss of consciousness</p> | Film Film Film Booklet Booklet Demonstration by instructor Pamphlet | <p><i>Modern Concepts of Epilepsy</i> (May need professional interpretation) <i>Prognosis Favorable</i> <i>You, Your Child with Epilepsy</i> <i>Epilepsy, Its Causes, Effects and Treatments</i> <i>The Patient with Epilepsy</i></p> <p><i>More than a Million People</i></p> |
| Isolation Procedure | <p><i>Introduction to isolation:</i> Explain what isolation means and reason for isolation techniques Isolation techniques is of the utmost importance to restrict the spread of disease Stress the danger of communicable disease in an institution Disease and conditions that warrant isolation procedures: Contagious Infection</p> | Lecture Film and booklet | <p><i>Hospital Sepsis: A Communicable Disease</i> Refer to section: <i>Common Disease and Conditions</i>, p. 72</p> |

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-----------------------------|--|---|--|
| Isolation Procedure (Cont.) | <p>Contaminated Clean Routes of entry Disease is spread by contact: Direct Indirect contact Vectors—flies, etc. Vehicles: <i>Food, water, etc.</i> Most susceptible to communicable disease: The infant The elderly Those in poor physical condition</p> <p><i>When working with residents with contagious diseases certain precautions must be taken:</i> Hand washing: Wet hands with plenty of soap and water, get under fingernails Use circular motion from lower area to hands Rinse hands under running water, slant your fingers toward sink so that the water will run from you Repeat steps A and B for 1 to 2 minutes</p> <p>NOTE: <i>Use paper towel for touching faucets, soap dispenser, etc.</i></p> <p><i>The use of the mask:</i> Use a mask when caring for patients with airborne or respiratory infection Always use clean mask—<i>wash hands before touching mask</i> Unfold and unroll, spread over nose and mouth Tie strings firmly at back of head To remove: Wash hands Untie strings, and hold by string only Place in container Wash hands</p> <p>Once a mask is moist it is no longer effective—<i>never wear longer than one hour</i> <i>Never drop mask from face and then reapply</i></p> <p><i>Use of the clean gown:</i> A gown is worn when care is given that requires prolonged, direct contact with the resident with a contagious disease Example: Bathing, feeding or too ill to care for himself If you have touched anything that is contaminated wash your hands Unfold gown and put arms in sleeve, open part at back Fasten neckband Bring inside edges of gown together in backtie</p> | <p>Lecture <i>Example of diseases that have to be isolated</i> Film</p> <p><i>Discussion of good health as related to resistance</i></p> <p>Demonstration for class Return demonstration by class <i>Correct any mistakes</i></p> <p>Demonstrate procedure and have attendant practice Book</p> <p>Demonstrate procedure and have attendant practice</p> <p>Demonstration</p> | <p><i>How to Catch a Cold</i></p> <p><i>Handbook for the Nursing Aides</i></p> |

BASIC NURSING CARE OF THE RESIDENT: Cont.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-----------------------------|--|--|--|
| Isolation Procedure (Cont.) | <p><i>Proper discard is important:</i> To remove after service has been given: Unfasten neckband and untie at waist Slip out of gown, pull off sleeves, then gown, fold outside of gown inward and roll into a bundle</p> <p>NOTE: <i>Do not touch anything as your hands are contaminated</i></p> <p>Roll gown inward with hand and place in proper hamper Wash your hands Remember only the outside is contaminated and turn and roll inward for discarding</p> | <p><i>The attendant should perform procedure under supervision</i></p> <p>Booklet</p> | <p><i>Isolation Procedure and Techniques</i></p> |
| Taking Temperatures | <p><i>Oral:</i></p> <p>Wash hands Remove thermometer from container Wash to remove taste of any solution Shake down to below 96° Ask resident to insert thermometer under tongue, close mouth and hold for three minutes Read thermometer Record on chart or prescribed paper Inform nurse of over 101° Check container in which thermometer is returned Wait 15 minutes if hot or cold food has been taken</p> <p>NOTE: <i>Many people have great difficulty in reading a thermometer</i></p> <p>Never give a mouth thermometer to a young child, a confused or unconscious patient or one who can't keep his mouth closed It is important to get correct information Return to solution for sterilization—importance to prevent spread of disease</p> <p><i>Rectal:</i></p> <p>Used with: Disoriented or confused resident Children under ten Check for cracks, breaks, etc. Shake down to less than 94° Put small amount of vaseline or lubricating jelly on tip To take the temperature: Put resident on side Insert thermometer gently 1½ to 1 inch</p> | <p>Book</p> <p>Demonstrate entire procedure Return demonstration of procedure closely supervised <i>Attendants can practice shaking, reading and taking temperature on each other</i> Construct an oversize sliding scale model of a thermometer for attendant to practice reading, or an enlarged handout showing scale can be helpful</p> <p>Demonstration using patient if available otherwise good lecture and discussion A closely supervised return demonstration is necessary, correct mistakes</p> | <p><i>Handbook for the Training of Nurses' Aides</i></p> |

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|--------------------------------|--|--|--|
| Taking Temperatures (Cont.) | <p>Retain for three minutes Remove, wipe Read Record temperature Inform nurse or supervise if temperature is over 101° Clean thermometer and place with used ones</p> <p><i>Auxiliary Temperature:</i> Check for cracks and breaks, place underarm, dry surface so that air cannot circulate around it; hold baby's arm against his side keeping thermometer in place for 5 minutes</p> | <i>Perform upon child if possible</i> | <i>Handbook for Training of Nurses' Aides</i> |
| Taking Pulse and Respiration | <p>Watch with second hand, paper and pencil: Resident in sitting position (rate may be different if he is standing) Find the pulse by placing two or three fingers on the palm side of the wrist near the thumb</p> | Book | <i>Handbook for Training of Nurses' Aides</i> |
| Giving of an Enema | <p>Solutions often used: Soapy water or salt water, saline—1 qt. to an adult Prepare patient—tell him what and how you are going to do this procedure Gel. enema ready, temperature should be 105°F.</p> <p>To give the enema: Put resident on left side, lubricating jelly on rectal tube, 3 in., insert tube slowly, carefully, open clamp—empty bag or can—remove tube Place patient on bed pan—patient to hold solution 5 minutes—never allow patient to go to bathroom to expel enema unless you have checked with nurse Put expel into bed pan—when patient finishes, remove bed pan, check for anything unusual—wash patient's hands—wash own hands If resident unable to expel <i>notify medical service at once</i> After cleaning material, return to patient and offer any assistance</p> | <p>Lecture</p> <p>Book</p> <p><i>Demonstrate use of equipment</i></p> <p><i>Each student should be checked out on procedure with actual experience in administering the enema to a patient</i> <i>Attendant should be closely supervised</i> <i>Correct any errors</i></p> | <p>Check with medical authority for exact mixture <i>Handbook for Training of Nurses' Aides in Hospitals</i></p> |
| "The Fleet Enema" | <p><i>The fleet enema is probably the fastest and easiest to use from the point of preparation, time and equipment involved</i> <i>Follow simple instructions as printed on the tube itself</i></p> | | |

COMMON DISEASES AND CONDITIONS THAT MAY AFFECT THE RESIDENT

| DISEASE | SIGNS AND SYMPTOMS | METHOD AND/OR CAUSES OF INFECTION | REMARKS |
|---|--|--|--|
| ACNE pimples | Inflammation around the oil glands on face, chest and back. | Excessive secretion of oil with the formation of blackheads. | Very common with young adults, usually disappears in early twenties. Mild cases can be helped by washing with soap and water often. Severe cases should be treated by medical authority. |
| ATHLETE'S FOOT | Whitish and cracked skin between the toes. | A fungus or mold. Transmitted from floors, shoes, towels, etc. | Feet should be washed with soap and water and thoroughly dried. Contagious. Infection can easily result. Refer to medical authority. |
| BOILS | Large, red, sore, swollen, pimples on neck, about nostrils and on extremities. | Germs entering the skin surfaces by soiled clothing, hands, etc. | Do not squeeze or apply pressure. Refer to medical department. |
| CHAPPING | Rough, red areas on mouth, face and hands. | Cold weather and loss of oil in glands. | Protect against wind and cold, use oil, or cold cream. Exposed areas should always be dry. Refer to medical department. |
| CHICKENPOX Incubation period: 2-3 weeks, commonly 13-17 days. | In children the first symptom usually noticed is the rash which consists of small blisters that have developed from small pimples. In a day or two, crusts form which fall off in 14 days. The eruption comes out in crops so there may be pimples, blisters, and scabs all within a small area of the skin. | Contact with a previous case. Infection believed to be contained in discharges from nose and throat and the skin lesions, but not the scabs. | Very contagious. A mild disease and seldom any after effects. Important because of possible confusion with smallpox. Refer to medical authority. |
| COMMON COLD | Nasal discharge, soreness and dryness of throat with a cough, mild fever, uncomfortable feeling. | A minor infection highly contagious, contact and enter through the respiratory system. | Film: "How to Catch a Cold." Refer to medical department. |

COMMON DISEASES: Cont.

| DISEASE | SIGNS AND SYMPTOMS | METHOD AND/OR CAUSES OF INFECTION | REMARKS |
|--|--|---|---|
| CONJUNCTIVITIS Pink Eye | Acute redness and swelling of one or both eyes. Itching sensation. | Contact with an infected person or articles used by an infected person. | Recognize and report to medical authority. |
| DIPHTHERIA Incubation period: usually 2-5 days, occasionally longer. | Sore throat is usually the first symptom. Typically there are gray patches on the throat, palate, or tonsils, but some cases look like simple tonsillitis. In nasal cases, discharge from the nose occurs which usually chafes the upper lip and may be bloody. In infants, the first symptom may be croup, and no patches may be visible. | Discharge from nose and throat of cases of diphtheria and persons who remain well, although harboring the organism. | Diphtheria can be fatal. However, it varies greatly in severity and often epidemics are started by cases regarded as an ordinary "sore throat." Every child should be immunized against diphtheria. Notify medical authority. |
| DYSENTERY | Prostration with fever, vomiting and severe diarrhea, often bloody. Odor of feces may be very strong. | Drinking contaminated water or eating infected food. Feces of infected person on articles or equipment. | Report to medical authority. |
| FLU | Headache, sudden onset of fever, chills, sore throat, cough. Aches in limbs and back. | Infection of the respiratory tract. Spreads very rapidly by contact with infected person. | Weakness may last a long time. Danger that pneumonia may follow. Report to medical authority. |
| GERMAN MEASLES | May begin with mild symptoms of cold in the head but often the rash is first sign noted. Rash starts on face and head, spreads to neck and trunk. Rash usually resembles measles but may appear to be like scarlet fever, and usually lasts only 2-3 days. Fever is slight, occurring during rash. Commonly the glands at back of head, behind ears and along back of neck are enlarged. | Same as measles. | Very contagious but mild disease. Danger in exposure if staff member is pregnant. Consult medical authority. |
| GONORRHEA | A yellowish discharge of the genital tract or from the eyes. Male: Abscess on the prostate gland. Female: Chronic infection of the genital tract. Pain and discomfort. | Contact with fresh discharge from genital tract or from other infected areas. Most frequently through sexual intercourse. | Notify medical authority. |

COMMON DISEASES: Cont.

| DISEASE | SIGNS AND SYMPTOMS | METHOD AND/OR CAUSES OF INFECTION | REMARKS |
|-----------------------------|---|--|---|
| HIVES | Small pink and whitish raises of the skin that look like insect bites. Vary in size. May be very uncomfortable. | An allergic reaction to a substance eaten or inhaled or contact on skin. Itching may be severe. | Elimination of irritating substance. Refer to medical authority. |
| HEMORRHOID | Bloody discharge. Pain at time of excretion. | A swelling formed by dilation of blood vessels at the anus. | Refer to medical authority. |
| HOOKWORM | Itch appearing on feet or other areas that have come in contact with the larvae. Skin is sallow, dry and harsh, the patient is depressed, listless; diarrhea alternates with constipation. | Larvae enters the body through the pores of skin between toes. | Hookworm easily found in examination of stool. Refer to medical department. |
| IMPETIGO | Small blisters, weeping lesions, crusts on face and hands. | Transmitted by direct or indirect contact with infected person spread by scratching. | Very contagious—common especially in warm weather. Prompt recognition is important for control. Refer to medical authority. |
| INFECTIOUS HEPATITIS | The first symptoms are fatigue, lack of appetite, nausea, perhaps vomiting, abdominal discomfort and fever. A few days later jaundice develops in some. Urine may appear dark preceding the jaundice. | Contact with jaundiced or non-jaundiced case and possibly carriers. Can be transmitted by contaminated needles and syringes. Transmission by contaminated food, water or milk can occur. | Bed rest is important in treatment. Gamma globulin can prevent the disease in immediate contacts. Refer to medical authority. |
| LICE | Found in hairy part of body. Evidence of scratching, redness or actual lesions. | Transmitted by direct contact with the infected person or through infected clothing and bedding. | Recognition and proper method to remove lice. Refer to policy of institution or consult medical authority. |

| DISEASE | SIGNS AND SYMPTOMS | METHOD AND/OR CAUSES OF INFECTION | REMARKS |
|--|---|---|---|
| MEASLES | <p>Begins with fever followed by symptoms like a cold in the head, running nose, sneezing, inflamed and watering eyes and fever, the rash is usually first seen behind the ears, on forehead and face. It is blotchy and usually dusky red in color. The rash usually appears on the 3rd or 4th day but may occur on the 1st or as late as the 7th day.</p> | <p>Discharges from nose and throat of an infected person especially early in the disease before the rash appears.</p> | <p>Very contagious especially during the first few days before the rash appears. Practically everyone who has not had the disease is susceptible, hence, measles occur characteristically in epidemics. Notify medical authority.</p> |
| MENINGITIS Incubation period: 2-10 days. | <p>Onset usually abrupt, with vomiting, fever, headache and stiffness of neck.</p> | <p>Contact with discharges from nose and throat of carrier or case.</p> | <p>Notify medical authority upon first signs.</p> |
| MUMPS | <p>Onset usually sudden fever and swelling of one or more of the salivary glands, most commonly the parotids located at the angles of the jaws. Swelling reaches maximum within 24 hours and may last 7-10 days.</p> | <p>Contact with a previous case. Discharges from mouth from 2 days before to end of period of glandular swelling. Many cases are so mild as to go unnoticed yet can spread infection.</p> | <p>About one-third of the cases are so mild as to be unapparent. Involvement of ovaries and testicles is more frequent past puberty. Medical authority should be informed.</p> |
| PNEUMONIA | <p>An acute infection with sudden onset of cough, fever, often pain in chest. Cough. In children, vomiting and convulsion.</p> | <p>Discharge from mouth and nose of infected person; direct contact with infected person or articles of infected person.</p> | <p>Person may be more susceptible if wet, cold or fatigued. Pneumonia may follow other diseases such as flu, etc. Inform medical authority.</p> |
| POLIOMYELITIS Infantile Paralysis Incubation period: 7-21 days. Commonly 12 days. | <p>Onset sudden, with fever, dull pain on bending neck forward, pain on being handled, headache, vomiting. Sometimes sudden development of weakness of one or more muscle groups.</p> | <p>Virus present in nose and throat secretions and feces of cases.</p> | <p>Disease is probably most communicable in the early stages. Every person under 40 years of age should be vaccinated against poliomyelitis. Inform medical personnel.</p> |

COMMON DISEASES: Cont.

| DISEASE | SIGNS AND SYMPTOMS | METHOD AND/OR CAUSES OF INFECTION | REMARKS |
|---|---|---|--|
| RINGWORM | Circular scaly patches on scalp—leaves small bald areas. | Spread by exchange of caps, combs, brushes, etc., from the infected person. | Highly contagious. Notify medical authority. |
| SCABIES | Lines of sores with severe itching often between the fingers. May be found in folds of skin around waist, crotch, elbows. | Contact with infected person or articles that have been handled by infected person. | Avoid contact. Notify medical authority. |
| SMALLPOX | Onset sudden, usually with fever, a severe backache. About third day develops red pimples, felt below skin, and seen first about the face and wrists and other exposed surfaces. | Contact with case. Infection conveyed by discharges from lesions of skin and nose and mouth. | A relatively rare but very serious disease. Very contagious. Inform medical authority. |
| SORE THROAT AND SCARLET FEVER Incubation period: 2-5 days. | Scarlet fever is ordinary streptococcal sore throat with a rash. Onset usually sudden, with headache, fever, sore throat. Glands of neck usually enlarged. Usually within 24 hours and the rash appears as fine, evenly diffused bright red dots. The rash is seen first on the neck and upper part of chest, and lasts 24 hours to 10 days; when rash fades and the skin peels in scales, flakes or even large pieces. | Contact with a previous case or carrier. Discharges from nose and mouth or ears of a patient. Often spreads through mild, unrecognized cases. | Sore throat is important in causing or reactivating rheumatic fever. Medical authority must be informed. |
| STYES | Sore on eyelids. Uncomfortable. | Eye strain, rubbing eye with soiled hands, etc. | Refer to medical authority for treatment. |
| SYPHILIS | Skin eruption similar to measles or chickenpox. Sores in mouth and throat. | Contact with discharge from sores on the mucus membrane and skin. Usually through sexual intercourse. | Notify medical authority. |
| WHOOPING COUGH | Begins with cough which is worse at night. Symptoms may at first be very mild. If a resident vomits after a hard spell of coughing he may be suspected of having whooping cough. | Contact with a previous case. Discharges from nose and mouth especially in the early stages before the whoop begins. | A disease with serious aftereffects. Medical authority should be notified. |

PURPOSE: To help the attendant perform his tasks with the proper amount of physical effort, in the correct way, to prevent fatigue, strain and personal injuries.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|------------------------------|---|---|---|
| Commentary | <p>Knowing the proper way to stand, walk, stoop, sit, bend, lift and carry is important to reduce fatigue and prevent personal injury. Often residents need help in getting about and in such activities as the bathing process. Some need help in moving in bed while others may be almost completely helpless and two attendants are necessary for the required movement. Knowing and using proper methods will make the job easier and safer for the attendant and the resident.</p> | <p>Lecture Discussion</p> | <p><i>Body Mechanics in Nursing Arts</i>, p. 15</p> |
| Proper Body Mechanics | <p><i>Body balance:</i> Base support is related to body balance A broad base with feet slightly apart or one foot ahead of the other provides good body balance</p> <p><i>Proper body alignment</i> is important to minimize fatigue and perform the function with the best advantage</p> <p><i>Walking:</i> Proper walking habits reduce fatigue and body jar Body weight is shifted with each forward step Good step rhythm moves the body forward with less effort The position of the feet in relation to the ankle is important Good shoes—low heels, properly laced and well fitted are necessary</p> | <p>Chart Demonstration</p> | <p><i>Consult with Physical Therapist of institution or nearby hospital</i> Figures 1 and 2, p. 79</p> |
| | <p><i>Stooping:</i> Stooping with proper body alignment and position prevents fatigue Lower the body Keep back straight As knees are bent—the feet are apart, one slightly ahead of the other—thus a broad base for better balance is established The body is held slightly forward above the hips</p> | <p>Lecture Chart Discussion Demonstrate</p> | <p>Figures 3 and 4, p. 79</p> |
| | <p><i>Sitting:</i> Proper body alignment when sitting reduces muscle strain and provides proper circulation in the blood vessels in the thighs The trunk should be in the same alignment as when standing The feet should be flat on the floor Sitting back in the chair to provide better support</p> | <p>Chart</p> | <p>Figures 5 and 6, p. 79</p> |
| | <p><i>Reaching:</i> Keep work close to the body when performing tasks at tables, desks, etc. Reaching toward table from a bending position will cause undue muscle strain and fatigue</p> | <p>Chart</p> | <p>Figures 7 and 8, p. 79</p> |

BODY MECHANICS: Cont.

PURPOSE: To give the attendant the necessary understanding and information so that he may be able to answer questions and supervise the activities of the resident concerning the social and physiological aspect of sex.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-----------------|---|---|---|
| Introduction | <p>Sex education cannot be limited to a lecture. Information about sex is learned by the individual as he develops. The learning of the "facts of life" constitute an important part of the so-called "growing-up" process.</p> <p>Sex training is not so much a question of "how much" the child learns as it is a matter of "what" and from whom he receives the information. Usually, the responsibility for the child's sex education is with the parents in the home. When the youngster has a question to ask about some phase of sex it is natural that he will come to his mother or father if he knows that he can obtain a correct answer without being embarrassed or made to feel foolish.</p> <p>In the institution, where the parent is not present, the most likely person to answer the day-to-day questions an individual may have about sex would be the attendant.</p> <p>NOTE: <i>Questioning or behavior that appears to be excessive or unusual should be referred to a professional staff member.</i></p> | <p>Lecture and Discussion Book</p> <p>Book</p> <p>Book</p> <p>Book</p> <p>Pamphlet</p> <p>Booklet</p> | <p><i>What to Tell Your Children About Sex Baby and Child Care</i>, pp. 372-380</p> <p><i>The Professional Houseparent</i>, Chapter 10</p> <p><i>Child Behavior</i>, pp. 198-209</p> <p><i>How to Tell Your Child About Sex Understanding Sex</i></p> <p>See section on <i>When to Refer</i>, p. 93</p> |
| Sex Instruction | <p><i>Procedure:</i></p> <p>As a general rule it may be best to tell the resident the truth about sex from the start</p> <p>Consideration should, of course, be given to his level of understanding</p> <p>Answer questions simply and directly</p> <p>There is usually no need to go into a long and lengthy discussion</p> <p>It is suggested that only the proper names and terms be used when discussing parts of the body</p> <p><i>Points to keep in mind:</i></p> <p>As a child develops he may ask more detailed questions—it is at this time that additional information may be provided</p> <p>Remember, the person's curiosity should be satisfied at his level of understanding</p> <p>The subject of sex is to be presented in a positive way—not in a negative manner</p> <p>The so-called "bad" part about sex, such as disease and illicitness may be left out until the person has at least some basic understanding of the over-all subject</p> <p>NOTE: <i>The attendant must realize that the resident may ask questions about sex at most any time. However, if a direct answer is not appropriate at the moment, the answer may be postponed simply by saying, "I'll tell you later." Be sure that promise is kept.</i></p> | <p>Lecture</p> <p>Discussion</p> <p><i>Exchange ideas with class on all issues</i></p> | <p>Use any basic physiology textbook</p> |

SEX EDUCATION: Cont.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|---------------------|---|---|--|
| Menstruation | <p><i>Explanation:</i> Menstruation refers to the monthly discharge peculiar to women. The onset of this physical change somewhere between twelve and seventeen is a sign that a girl is sexually mature and that reproduction is possible. As the first menstrual period can be a very disturbing experience for the young girl, the awareness of this condition by the attendant is very important; explanation and help is usually needed. Specifically what happens, is that the lining of the uterus becomes thickened as extra blood is supplied in the event of fertilization. When fertilization does not take place the extra blood is discharged. This monthly cycle is perfectly normal and extends to the menopause. The record of menstruation:</p> <p><i>Accurate records should be kept</i> <i>It may be advisable that the attendant verify that the menstrual period has begun</i></p> <p><i>Health practices during time of menstruation:</i> Baths and showers are continued Proper instruction and supervision in the use of sanitary napkins is necessary Regular exercise and relaxation are important Correct diet and proper rest are necessary</p> <p><i>Irregularity:</i> During the first year of menstruation, some girls have irregular periods even skipping a month or so It may take time for the body to adjust itself to its new cycle By the end of the first year menstrual periods will probably come regularly Even then the cycle can be affected by change in health or routine Frequent irregularity after the first year should be cause for medical referral</p> | <p>Lecture Discussion Film Book Pamphlet</p> <p>Pamphlet Pamphlet Pamphlet</p> <p>Booklet</p> <p>Lecture Discussion Book</p> <p>Books</p> | <p><i>The Story of Menstruation</i> <i>The Professional Houseparent</i>, p. 145 <i>What Happens During Menstruation</i></p> <p><i>Very Personally Yours</i> <i>Growing Up and Liking It</i> <i>You're a Young Lady Now</i></p> <p><i>From Fiction to Fact</i>, p. 21</p> <p><i>The Professional Houseparent</i>, pp. 151-153 (For additional information consult most any introductory book on health and hygiene)</p> <p><i>Baby and Child Care</i>, pp. 368-372, 378-379</p> |
| Menopause | <p><i>Explanation:</i> The menopause is that period in a female's life when menstruation normally ceases The menopause is popularly referred to as the "change of life" Pregnancy can no longer take place Occurring rather abruptly somewhere between the age of forty to fifty years the menopause oftentimes brings with it disturbing physical and emotional sensations It is quite important that the attendant and the resident understand as much as possible regarding the basic facts of this condition</p> | | |
| Masturbation | <p><i>Explanation:</i> Masturbation may be defined as self-stimulation of one's own sex organs The practice appears to be almost universal among boys and quite common among girls</p> | | |

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-----------------------------|---|---|---|
| Masturbation (Cont.) | <p>Masturbation may occur at almost any age and may continue as a habit throughout adolescence and into adulthood</p> <p>NOTE: <i>While there is little or no medical evidence indicating that masturbation is injurious to the physical body it is important to realize that masturbation is not a desirable form of expression</i></p> <p>Control:</p> <p>To control masturbation it is suggested that the resident be exposed to as many healthy activities as possible</p> <p>This habit generally ceases or becomes less frequent as the individual learns to participate (at his level of development) more fully in the socially acceptable interests and activities of his surroundings</p> <p>Stress importance of recreational activities</p> | <p>Book</p> | <p><i>Health for Effective Living</i>, p. 107</p> |
| Nocturnal Emissions | <p>Explanation:</p> <p>It is very common for boys to have ejaculations (wet dreams), in their sleep This experience is considered quite normal and should not cause alarm</p> <p>However, all young men do not have nocturnal emissions; this does not mean that they are lacking in masculinity</p> | <p>Booklet</p> <p>Book</p> <p>Book</p> | <p><i>Now They are Grown</i>, p. 22</p> <p><i>Adolescence</i>, p. 107</p> <p><i>Health for Effective Living</i>, p. 107</p> |
| Homosexuality | <p>Explanation:</p> <p>The word "homosexuality" refers to the sexual desire of one individual for another of the same sex</p> <p>In institutional life individuals are grouped by sex and are usually in close physical proximity with one another</p> <p>It should be understandable that some individuals may seek homosexual experiences</p> <p>Control:</p> <p>Close supervision on the part of the attendant is necessary</p> <p>Adequate facilities assuring a degree of privacy are desired</p> <p>The attendant should be familiar enough with the resident under his supervision to sense the need to take action before there is an overt expression</p> <p>Encourage healthy physical activities</p> <p>NOTE: <i>Both the attendant and cottage supervisor should be aware of individuals under their charge who have a history of homosexuality</i></p> | <p>Book</p> | <p><i>Health for Effective Living</i>, p. 108</p> |
| Points to Stress | <p>That intelligent and sympathetic sex instruction is essential for the healthy development of all individuals</p> <p>That some curiosity about sex is normal</p> <p>That appropriate sex attitudes are largely the result of proper training</p> <p>That the mentally retarded are no more sexually delinquent than a cross section of the average population</p> <p>That there is nothing to hide about the subject of sex</p> <p>That healthy physical and recreational activity should be encouraged</p> <p>That the attendant ideally should possess insight and understanding regarding all basic matters pertaining to sex</p> | <p>Lecture</p> <p>Discussion</p> <p>Books</p> | <p><i>The Adjustment of Severely Retarded Adults in the Community</i>, p. 110</p> |

SUBJECT: RELIGION**PURPOSE:** To provide the attendant with an understanding and appreciation of religious differences (thereby creating religious tolerance).

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|--|--|---|---|
| Commentary | <p>The matter of religious observance is usually determined by institutional policy. Because the attendants and the residents in institutions come from varied religious backgrounds there is a need to develop an understanding and appreciation of other religious beliefs.</p> | <p>Lecture</p> <p><i>Discuss importance of religion in the lives of the residents</i></p> <p>Booklet</p> | <p>Review policy of institution on religious observance</p> <p>Consult with Chaplain Service</p> <p><i>The Mentally Retarded and the Church</i></p> |
| Definition of Religion | <p>Parents are often concerned that their children receive appropriate guidance and training in their particular religious faiths.</p> <p>The awareness of conviction of the existence of a supreme being</p> <p>The realization of this belief is exhibited in different ways by different individuals or groups</p> <p>The quest for the values of the ideal life</p> | | <p><i>Standard Dictionary</i></p> |
| Major Religions | <p>The major religions in this country:</p> <p>Protestant</p> <p>Catholic</p> <p>Jewish</p> <p>Identify basic beliefs and observances</p> <p>Identify all religious holidays</p> | <p><i>Discussion of central beliefs by representatives of each major religious group</i></p> <p>Lecture</p> | <p>Consult with institutional Chaplain</p> <p>Consult local council of churches</p> <p>Consult calendar of religious holidays</p> |
| Responsibility of the Attendant | <p>Encourage and assist the resident to observe his respective religious activities</p> <p>Assure proper dress for religious activities</p> <p>Give attention to the care of the resident's personal religious articles</p> <p>A particular place to keep items used for religious occasions may be necessary</p> <p>Recognize the highly personal nature of religion—a sense of formality and respect should be encouraged by the attendant</p> | <p>Discussion</p> <p><i>Illustrate how the attendant may assist with the necessary religious activities, etc.</i></p> | <p>Policy of the institution</p> |

SUBJECT: DISCIPLINE

91

PURPOSE: To help the resident exhibit behavior considered appropriate and acceptable by the group in which he functions.
To give the attendant the means and knowledge of control thus helping the resident achieve the goal as prescribed by the institution.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-----------------------|--|--|---|
| Commentary | Discipline has different meanings to different people, to some it may mean to regulate, to govern, to keep in line—a strict way of life. To others it means punishment. In a program for the retarded, discipline should mean that which is done for and with the resident, not to him. It should be that which is done for his own personal safety and in order for him to get along with others. | Lecture Booklet Book | <i>How to Discipline Your Children</i> <i>Houseparents in Children's Institutions</i> , p. 42 |
| Definition | <i>What is discipline?</i> Properly directed learning utilizing guidance, control, direction and purpose The application of methods to prevent or correct infractions of established rules or policies Instruction and training: (The means of attaining discipline) Self-discipline: (The goal of all disciplinary action) | Discussion | Consult with institutional psychologist |
| Aspects of Discipline | <i>The objective of discipline:</i> To maintain control To assure safety of resident To achieve the goal of the institution To teach external control To help resident learn to make the proper choices <i>Some types of disciplinary action used:</i> Demerits Scolding Restrictions of privileges Assignment of extra work Confinement <i>The attendant should be consistent and fair:</i> The fair attendant Treats all residents the same Does not allow favoritism to play a part in your efforts for control The consistent attendant Is the same to all residents in similar situations Does not change punishment or reward according to his moods | Booklet Book Booklet Examples of action taken Discussion | <i>The Controversial Problem of Discipline</i> <i>The Professional Houseparent</i> <i>The Why and How of Discipline</i> Policy of institution regarding discipline |
| | | <i>Incidents taken from actual situations in the institution may help stress the point</i> Book | <i>Social Work Research</i> , pp. 254-255 |

DISCIPLINE: Cont.

SUBJECT: THE RESPONSIBILITY OF THE ATTENDANT TO THE PARENT

PURPOSE: To interpret to the parent the program of the institution.
To be aware of the feelings of the parents about their children.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|--|---|---|---|
| Commentary | <p>Because of the responsibility of the attendant for the care and well-being of the resident he is often the person to whom the parent or relative will go for information. The attendant plays a major role in the public relations program of the institution by interpreting the proper concept of care to the parent.</p> <p>The information received by the parent from the attendant is highly regarded. The attendant is the one who sees the child everyday, is with him during play, at meals and at bedtime, knows the little things about him.</p> <p>Care must be taken by the attendant in giving information to the parent or relative. Incorrect information can lead to serious misunderstanding.</p> <p>The attendant should only answer those questions about the resident that do not involve treatment or technical knowledge. Questions of a technical nature should be referred to the proper authority. The attendant should not try to diagnose the resident's problem or problems.</p> <p>The attendant must remember that his actions are very important in the formation of opinions by parents about the institution. The appearance of the resident, the handling of the resident's personal items such as clothing—are examples of ways by which the parent judges the care that his son or daughter is receiving.</p> | <p>Lecture and Discussion</p> <p>Book</p> | <p><i>Houseparents in Children's Institutions</i>, p. 21</p> |
| Parent expectation for his child | <p>Affection</p> <p>Understanding</p> <p>Special attention</p> <p>Special help</p> <p>Constant observation</p> <p>Happiness</p> <p>Contentment</p> | <p>Film</p> <p>Pamphlet</p> <p>Article</p> <p>Class discussion</p> <p><i>Discuss such questions as</i></p> <p>What would you, as a parent, expect from the attendant who has the responsibility of caring for your child?</p> | <p>See section of this manual <i>When to Refer</i>, p. 93</p> <p><i>Tuesday's Child</i></p> <p><i>The Three Stages</i></p> <p><i>Needs of Parents of Mentally Retarded Children</i></p> |
| Information the parent or relative desires | <p>About the program of activities:</p> <p>The attendant should not discuss the academic program, its success or failures</p> <p>The attendant should be able to relate the recreation interests of the resident</p> <p>The attendant should know how the resident spends his free time, etc.</p> <p>About the progress the resident is making:</p> <p>Is he able to eat without help?</p> <p>Is he able to play ball?</p> <p>Is he able to go on day work?</p> <p>Has there been a loss or gain in weight?</p> <p>How does he get along with others?</p> | <p>Observe and report on a selected group of residents</p> | <p>Draw from situations and incidents that have occurred within the institution</p> |

THE RESPONSIBILITY OF THE ATTENDANT TO THE PARENTS: Cont.

| SUBHEADING | SUGGESTED CONTENT | SUGGESTED TEACHING AIDS AND METHODS | REFERENCE |
|-------------------------------|--|--|---|
| The Referral Service | <p><i>The attendant should not answer technical questions but should refer parent to proper service—the parent may be directed to:</i></p> <p>Social Service Medical Dental Psychological Recreational Educational</p> | Discussion | See section, <i>When to Refer</i> , p. 93 |
| What to say and how to say it | <p><i>Recognizing what to say and what not to say to parents is very important:</i></p> | Lecture and Discussion <i>Use examples of situations that will illustrate, show what to say and how to say it</i> | |
| Observing | <p><i>Know and observe the resident and be able to relate this information in an acceptable understandable manner to the parent</i></p> | <i>Discussion of what should be observed</i> | |
| False hopes | <p><i>There is danger in providing the parent with false hopes about his child.</i></p> <p>NOTE: <i>By definition the condition known as mental retardation does not improve. It would be cruel to lead a parent to believe that his or her child might eventually return home as "cured." It is, of course, quite true that a retarded child, after exposure to proper training, may learn how to better face the world and as a result of this might be subject for discharge.</i></p> | Example and discussion <i>Use situation showing what can happen with false hopes</i> | |

APPENDIX

2

- AGGRESSION**—An unprovoked attack, an act of hostility; to begin a quarrel.
- AMBULATORY**—Of or pertaining to walking.
- ANTICONVULSANT**—A medicine which acts to prevent seizures.
- ANTI-SOCIAL**—Unwilling or unable to associate normally with one's fellows.
- ANXIETY**—A sensation of fear, discomfort or uneasiness; may or may not be caused by an externally dangerous situation; eagerness; apprehension.
- BACKWARDNESS**—A term sometimes used to refer to any retardation in physical or intellectual development. Has also been used in a more restricted sense to refer to the intelligence of individuals obtaining I.Q. scores roughly from 70 to 90.
- BIRTH-INJURY**—A general term which refers to any damage done to the brain.
- BORDERLINE**—A term which has been used to describe intelligence of people obtaining I.Q. scores roughly from 70 to 90.
- CARDIAC**—Pertaining to the heart.
- CEREBRAL PALSY**—A disability due to damage of center of the brain before or during birth resulting in imperfect control of the muscles and marked especially by muscular in-co-ordination; paralysis and speech disturbances.
- CHRONIC**—Continuing for a long time (having long had an affliction).
- CHRONOLOGICAL AGE**—Age determined by time; number of actual years lived.
- COMPREHENSION**—Act of understanding; the term is usually used to refer to a level or degree of understanding in a particular area of functioning as, for example, level of reading comprehension.
- CONGENITAL**—Actually or potentially present in the individual at birth, whether as a consequence of heredity or of environmental factors.
- CONTAMINATE**—To soil, to stain or corrupt by contact.
- CONTUSION**—A bruise without breaking the skin.
- CONVULSION**—A violent, involuntary series of muscular contractions; a spasm.
- CRETINISM**—A congenital morbid condition, characterized by deformity, with goiter or virtual absence of the thyroid gland and commonly, mental retardation.
- CULTURE**—The characteristic values and other features of behavior of a group, nation or race of people.
- *CURRICULUM**—An educational program, a course of study.
- CUSTODIAL**—Relating to custody or guardianship; acting as a keeper; a term sometimes used in referring to the severely retarded; referring to an individual receiving an I.Q. score of 25 or below.
- *DEAFNESS**—Hearing impaired to the degree that it is of little or no utility for the purposes of ordinary communication.
- DEFECATION**—Discharge of (fecal) substances from the intestines; to void excrement.
- *DELUSION**—A false belief developed without appropriate basis and maintained despite contrary evidence.
- *DIAGNOSIS**—The procedure by which the nature of a disease is determined.
- *DULL-NORMAL**—A term sometimes used to describe the intelligence of people obtaining I.Q. scores from approximately 80 to 90.
- *ELECTROENCEPHALOGRAPH**—An apparatus which provides a graphic record of the electrical activity of the brain; the tracing made is called an electroencephalogram; abbr. E.E.G.
- *ENCEPHALITIS**—An inflammation of the brain resulting from an infection; sometimes called "sleeping sickness."
- ENVIRONMENT**—That which surrounds; external conditions and influences affecting the individual.
- EPILEPSY**—A nervous disease usually characterized by convulsions and practically always by loss of consciousness; a seizure.
- EVALUATION**—A professional appraisal as with respect to intelligence, personality, speech, etc.
- EXTREMITY**—The utmost limit or part; a limb of the body; and the end part of an object.
- FECES**—Waste matter discharged from the intestines; excrement.
- FEEBLE-MINDNESS**—Lacking the normal mental powers; a term occasionally used as a synonym of mental retardation; term now going out of popular use.
- *FETUS**—The embryo or offspring; principally from the end of the third month until birth.
- FRAME OF REFERENCE**—A term commonly used to indicate the factors which influence the way different people view the world around them; a connected set of facts, experiences and/or ideas.
- GAMMA GLOBULIN**—A fraction of blood plasma rich in antibodies; opposes other substances used against measles and hepatitis.
- GUIDANCE**—The provision of information and assistance; the act of leadership.
- HALLUCINATION**—Perception of objects with no reality; experience of sensations with no external cause; such a condition usually arises from disorder of the nervous system.
- HANDICAP**—Any disadvantage that makes success more difficult, a limitation.
- *HEMORRHAGE**—Discharge of blood from the vessels.
- *HEREDITARY**—Pertaining to the biological mechanism by which characteristics are transmitted to offspring.
- HIGH GRADE**—A term sometimes used in the field of mental retardation synonymously with *educable*; referring to individuals with an I.Q. score usually between ~~25 and 50~~.

HOSTILITY—An open act of negativeness; an unfriendly attitude; ill will.

HYDROCEPHALY—A condition marked by an excessive amount or pressure of the cerebrospinal fluid in the cranial cavity.

***HYDROMICROCEPHALY**—A condition characterized by both hydrocephalus and microcephaly.

***IDIOR**—A term now seldom used to describe the intelligence level of persons obtaining I.Q. scores below 25 or 30; often a term of reproach.

***IMBECILE**—A term that has been used to describe the intelligence level of persons obtaining an I.Q. score from 25 or 30 to 50; often a term of reproach.

INCUBATION PERIOD—The period of time between infection and the appearance of signs of a disease.

***INFLAMMATION**—A tissue reaction to injury causing redness and swelling of the skin; a reaction of the skin resulting from an injury.

INTELLIGENCE QUOTIENT—A number denoting the intelligence of a person determined by multiplying the mental age (MA) by 100 (to eliminate decimals) and dividing by chronological age (CA); abbr. I.Q. The formula for I.Q. is $MA/CA \times 100$.

ISOLATION—A state of being alone; separation.

LARVAE—The immature wingless, and often worm-like form in which certain insects hatch from the egg.

LOW GRADE—A term sometimes used in the field of mental retardation synonymously with *custodial*; referring to individuals with an I.Q. score usually below 25.

***MACROCEPHALY**—A rare condition in which the head is abnormally large.

MATERNAL—Of or pertaining to a mother; derived or received from one's mother; motherly.

***MEMORY**—The recall of previous experience and/or sensations.

MENTAL AGE—Level of intellectual development expressed as equivalent to the average of a particular chronological age group.

MENTAL DEFICIENCY—A term sometimes used as a synonym of mental retardation.

MENTAL DETERIORATION—A deterioration or retrogression in the level of intellectual functioning.

MENTAL RETARDATION—A condition of impaired or incomplete mental development; the term refers to all degrees of mental undevelopment ranging usually from I.Q. scores of 75 or below; Cf., mental subnormality.

MENTAL SUBNORMALITY—The World Health Organization (Tec. Rec. No. 75, '54) proposed that this term be used as a general term embracing all classes of persons whose general mental development is incomplete or insufficient, relative to their chronological age; the degrees of subnormality they suggest

are "mild," "moderate" and "severe." The term mental subnormality is sometimes used as a synonym of *mental retardation*.

MENTALLY HANDICAPPED—A term sometimes used as a synonym of *mental retardation*.

MICROCEPHALY—A rare condition in which the head is greatly diminished in width and vertical measurement; there is usually a receding forehead.

MIDDLE GRADE—A term sometimes used in the field of mental retardation synonymously with *trainable*; referring to individuals with an I.Q. score usually between 25 and 50.

Mongolism—Abnormal condition of a child born with a wide, flattened skull, narrow, slanting eyes, and generally mentally deficient.

***MORON**—A term that has been used to describe the intelligence of persons obtaining I.Q. scores of from 50 to 70, 75 or 80; often a term of reproach.

NAUSEA—A sickness of the stomach; vomit.

***NEUROSIS**—An emotional conflict which reduces the effectiveness of the individual's functioning but in which there is little or no loss of contact with reality.

NUTRITION—The act or process of nourishing or being nourished; nutriment; food.

***ORGANIC**—Pertaining to the structure of organs; organized; forming a whole.

ORTHOPEDECS—The science dealing with the correction or cure of deformities and diseases of the spine, bones, joints and muscles.

PAROTID—A salivary gland below and in front of the ear.

PATERNAL—Received or inherited from a father or the male line; related to one's father's side; fatherly.

***POSTNATAL**—Subsequent to birth; after birth has taken place.

***POTENTIALITY**—What is possible but not now actually realized, as for example, the "potentiality" for successful social living.

***PRENATAL**—Present before birth.

PRIMARY—First or highest in rank or importance; principal.

PROGNOSIS—A forecasting of the probable course and termination of a disease.

PSYCHIATRY—The medical specialty dealing with or treating mental diseases.

***PSYCHOLOGY**—The science which studies behavior in its relation to environment.

***PSYCHOPATH**—A person whose actions persistently violate legal and social laws and whose behavior is directed toward gratification of his own needs with disregard for the needs of others.

***PSYCHOSIS**—A disorder of behavior characterized by loss of contact with reality; this is a mental disease and is not to be confused with *mental retardation* which is a mental condition.

*RETARDATE, MENTAL—A person who is mentally retarded.

SECONDARY—Next after the first in order, place, time, importance; not primary.

SEIZURE—A sudden attack, as an illness or a disease; for example, an epileptic attack.

SHELTERED WORKSHOP—A facility which provides occupational training and/or protective employment for the mentally retarded or persons with other handicaps.

SLOW-LEARNER—A term used to refer to people who are somewhat retarded; individuals obtaining I.Q. scores ranging approximately from 80 to 90; a synonym of *educable*.

SOCIAL WORK—An organized act or technique directed toward the betterment of social conditions; to promote the social welfare.

SOCIOLOGY—The science or study of the order, development, organization and functioning of human society.

THERAPY—The treatment of a disease as by some process.

* Taken from Volume 64, No. 2, A.J.M.D., permission granted by editor.

TRAINABLE—Referring to semi-dependent individuals with an I.Q. score usually between 25 and 50. Can learn self-care and to adjust socially; may be able to develop simple job or vocational skills; incapable of academic work.

*TRAINING SCHOOL—Sometimes used as a synonym of an institution or hospital for the mentally retarded; more specifically, an institution emphasizing education and habilitation.

*TRAUMA—Any injury; may be produced by physical or psychological means.

URINE—The fluid excreted from the kidneys.

VAGINA—In female mammals, a canal which leads from the uterus to the external orifice of the genital canal.

VALUES—A term sometimes used in referring to an individual's or group's attitude or feeling toward social issues; group judgment stemming from experience and/or training.

VECTOR—An organism, usually an insect, which carries or transmits germs and disease.

VENEREAL DISEASE—Any of several diseases transmitted chiefly by sexual intercourse, as syphilis, gonorrhea, etc.; abbr. V.D.

LOYALTY

If you work for a man in heaven's name work for him.

If he pays you your wages which supply you bread and butter, work for him; speak well of him; stand by him and the institution.

If put in a pinch an ounce of loyalty is worth a pound of cleverness.

If you must vilify, condemn and eternally dispare—resign your position, then when you are outside, damn to your heart's content, but as long as you are a part of the institution do not condemn it.

If you do, you are loosening the tendrils that are holding you to the institution, and at the first high wind that comes along you will be uprooted and blown away, and probably will never know the reason why.

ELBERT HUBBARD
